

Open a market, not just a token.

A market that trades from block one. No liquidity deposit, no founder allocation. Live on 0G, Base, Arbitrum One and Monad.

THE PRODUCT

One transaction, and the market is already trading.

Most launchpads hand you a token and a page, then you wait for a listing. ADEXTO skips the wait because there is nothing to wait for.

- **No liquidity to deposit**

A bonding curve is the market. The first buyer trades against it in the same block it was created, so nobody has to seed a pool or find a counterparty.

- **No founder allocation**

100% of the supply enters the curve at genesis. The creator holds none. There is no unlock schedule to read and no insider bag to front-run.

- **No application, no gatekeeper**

Anyone can open one, on any of the four mainnets, and a market behaves the same wherever it lives. Nobody reviews it and nothing has to be approved first.

Three things a new market normally has to wait years for.

- **A terminal built for minutes-old assets**

Candles from one second upward, an order book and a live trade feed. A chart on a one-minute interval is useless when the asset is four minutes old, so the terminal does not start there.

- **A buyer on another chain can pay**

Holding only USDC somewhere else is enough. The price is payable over plain HTTP — no bridge, no swap, and the buyer never has to hold the market's gas token.

- **An agent can trade it unattended**

An MCP server ships with the venue, so an AI agent can list markets, pull a quote and execute a buy on its own — no scraping, and no custom integration for each new market.

This campaign is for people who want to try that before it has a crowd.

THE CAMPAIGN

Four tasks. One of them is the product.

#	TASK	VERIFIED BY
1	Follow @adexto_ on X	Galxe native credential
2	Join the ADEXTO Telegram group — t.me/adexto	Galxe native credential
3	Buy at least 0.1 0G of \$ADEXTO on 0G mainnet adexto.xyz/token/adexto?chain=16661&tf=60	The curve's on-chain Swap event
4	Still hold at least 500 \$ADEXTO when you claim	Galxe native ERC-20 balance check

Tasks three and four are one idea split in two: buy, and still be holding. The activity lands on 0G mainnet, so it stays inside the ecosystem hosting the campaign.

TASK 3, EXACTLY

Two and a half cents, quoted from the contract.

FIELD	VALUE
Market	\$ADEXTO on OG Mainnet, chain id 16661
Curve contract	0xc80e0659D2Fc29e62605C9DF6182a85372652B60
Token contract	0xA1358C17004469C7CA5365AbafD294F9b2c11DF7
Minimum spend	0.1 OG , and more is fine
What 0.1 OG buys	4,943.78 \$ADEXTO — getBuyQuote , read from the live curve
Cost in USD	≈ \$0.0235 at OG = \$0.234516
Gas for the buy	≈ 0.0004 OG, so budget ~0.101 OG in total
Where to buy	adexto.xyz/token/adexto?chain=16661&tf=60

The hold threshold is 500, not 4,943, because a curve gets more expensive as it is bought. A late participant spending the same 0.1 OG receives fewer tokens and must still pass.

THE REWARD

An OAT called *ADEXTO* — *Block One*.

The reward is the record itself, and we say that up front. Every market's supply goes to the curve at genesis — that fairness is the product, and it is why the OAT is what a participant walks away holding.

● What the holder gets

A permanent on-chain record that they bought into an ADEXTO market while it was still new — one transaction had created it, it was already trading, and they were among the first through the door.

● Who it attracts

People who came to use the venue, not to wait for a snapshot. That is the audience worth having at this stage, and it is the audience an honest reward description brings in. A hundred people who open the terminal beat ten thousand who never do.

WHY THIS IS WORTH YOUR AUDIENCE'S TIME

It is shipped, and other people have already checked.

- **Live, not a testnet demo**

Four mainnets — **0G, Base, Arbitrum One, Monad** — with six markets open and trading today. Anyone can open the terminal right now and watch a real chart, and the docs are at docs.adexto.xyz.

- **Named by 0G already**

ADEXTO is one of the eight projects in the **0G Atlas Founder House Demo Day** line-up, 18 September 2026, and appears in 0G's own A2A economy landscape — live on 0G mainnet, tagged Base, Arb and Monad. Sources are linked at adexto.xyz/recognition.

The venue is built and running. What this campaign adds is its first wave of traders.
